» **IMPORTANT INFORMATION ABOUT VEHICLE SEATING**

Inspection, approval and certification are required for vehicle seating that use anchorages not originally supplied by the manufacturer, non-original seat belts or seat belts moved from the vehicle panels to seats. All modifications resulting in a change in vehicle category also require certification. The client has the option to decline inspection and certification and arrange their own inspection and certification.

» **WHAT CADDY STORAGE CAN OFFER YOU**

Caddy Storage utilises certified engineers to inspect, supervise and certify all vehicle seat installations. This provides our clients with a compliance certificate signifying that a registered automotive engineer has verified that the installation is safe, legal and conforms to legal requirements. This process allows our clients to provide evidence to their personal insurance provider to guarantee that their vehicle remains appropriately insured.

With this service, Caddy Storage can ensure that any vehicle seat installation or modification does not affect compliance with important regulations such as a change of vehicle category. In most cases, our clients will receive an interim letter from the automotive engineer and should receive all completed documentation within fifteen (15) working days.
